**MiNDCAN Sustain+™** is a software platform that helps organizations of all sizes to effectively manage their environmental sustainability efforts. The platform provides a centralized location for data collection, tracking, and reporting, eliminating the need for multiple spreadsheets and scattered data storage. This makes it easy for sustainability managers to review and report on data from multiple sources and locations.

Sustain+™

MiNDCAN Sustain+™ helps you to:

- Gather information on energy, fuel, natural gas, water, and waste usage.
- Analyze usage data over various time frames.
- Upload and monitor certificates from agencies such as ISO.
- Compile data for external agency reporting.
- Centralize environmental data management for all locations.

Key Features:

Track consumption of energy, gas, fuel, water, waste etc. with automatic error detection.

Track intensity of sales, hours worked, sq.footage, etc.

Utilize workflows to submit, review and approve.

Set targets for each location and company-wide.

Track initiatives that improve business.

View progress as target vs achievement and scorecards.

Manage documents including consumption data, certificates, etc.

Helps with maintaining compliance with certifications and auditability (CDP, ISO14001, ISO5001, IATF 16949).
